

Amir Balazade

Front-End Engineer

Istanbul, Türkiye · abalazade@gmail.com · github.com/amirblz · linkedin.com/in/amirbalazade

PROFESSIONAL SUMMARY

Front-End Engineer, 7+ years in Angular and TypeScript, most of it in FinTech and Web3, on screens dense with tables and charting where a wrong number is noticed in seconds. Comfortable turning a complicated business into features with product design and stakeholders, and drawn to the R&D and AI end of a product, where the shape of the interface is still open. Based in Istanbul, available for remote work.

TECHNICAL SKILLS

Frameworks and languages: Angular, TypeScript, JavaScript, HTML, CSS, Sass

State and data: RxJS, NgRx, NGXS, Redux, state management, REST API integration, WebSockets, SignalR, AgGrid, Highcharts, Trading View, charting

UI and design: design system, component libraries, Tailwind, PrimeNG, Angular Material, Bootstrap, BEM

Web platform: PWA, service workers, SSR, SEO, web performance, cross-browser support, OIDC, responsive design

Testing and tooling: unit testing, Karma, Jasmine, Git, GitLab, GitHub

AI: OpenAI API, Anthropic API, prompt engineering, streaming chat UI, RAG

PROFESSIONAL EXPERIENCE

Front-End Engineer, Remorch Co. (FinTech, Blockchain, Web3)

Oct 2024 - Present

Full time on site to April 2026, part time remote work, project based since

- Took ownership of a secure PWA end to end and shipped it, from architecture through to deployment.
- Built a modular Angular component library and the design system every DeFi feature was assembled from.
- Integrated REST APIs into secure workflows for digital assets, with the real-time updates the trading desk needs.
- Deployed a mobile-first, search-optimized platform and drove the performance optimization work that followed.
- Presented the product at the company's Web Summit booth as the technical person answering investors.

Front-End Engineer, Dara Broker Sedna Co. (FinTech)

May 2023 - Oct 2024

- Delivered an order management system with a cross-functional Agile team, pair programming daily with the desk.
- Built real-time trading views on AgGrid, Highcharts and TradingView, with live data and no page refresh.
- Integrated SignalR WebSockets to carry high-frequency data to more than 5,000 active traders.
- Mentored new joiners onto the stack and the brokerage business, and ran knowledge-sharing sessions.

Front-End Developer, MyMonshi (CRM, VoIP, Cloud)

Oct 2020 - Sep 2022

Hybrid

- Built a B2B CRM platform end to end, from design mockups through to production audio and video calling.
- Led the R&D that chose the core stack, reworked the state store, and built secure cloud storage and real-time chat.

Front-End Developer, Rampart Co. (Virtual Tour)

Aug 2017 - Oct 2020

Hybrid

- Ran requirements analysis with stakeholders and turned mockups into implementation plans the team could estimate.
- Raised code quality across inherited projects, and developed virtual tours for architectural projects.

SELECTED PROJECTS

- **zhambon.com.** Financial investment pool management web application
- **tisten.ir, apadanakitch.com, kalamato.com.** E-commerce sites built for organic search

EDUCATION

Bachelor of Computer Science, Azad University, Science and Research Branch

2017 - 2022
